Lecture 1 - Numbers and Notation

Robert Lowe

Division of Mathematics and Computer Science
Maryville College

Maryville

Outline

1. Quantitative Language

2. Evaluating Expressions

Maryville

Why You Are Bad at Math

- You have been taught a litany of rules and procedures, but no ideas.
- Your textbooks were lacking in text. Lots of color, lots of problems, no substance!
- Being bad at math was socially acceptable, and you seized the opportunity because memorizing rules and procedures is boring.

Maryville

A Brief History of Counting

- Tally Marks 40,000 years old
- Ishango Bone 20,000 years old, may have been a rudimentary calculator
- Formal mathematics, as we know it today, really started about 3000 years ago

Ancient Numeral Systems - Roman Numerals

- Representing Numbers as Figures
- Example: Roman Numeral System

Numerals		Transitions	
I	1		
V	5	IV	4
X	10	IX	9
L	50	XL	40
C	100	XC	90
D	500	CD	400
M	100	CM	900

Maryville

- Arithmetic was usually done with some sort of manipulative aid (counting board, abacus, etc).
- Roman numeral arithmetic is difficult. (Let's Try it)
  1. $I + I =?$
  2. $III + I =?$
  3. $XV - V =?$
  4. $V - I =?$
  5. $V \times IV =?$

Maryville

The Arabic/Indian Numeral System

- Introduced to the Western world by Al-Khwarizmi, but was invented in India
- Digits 0-9
- Positional value system

| 10^3	10^2	10^1	10^0

Maryville
COLLEGE

The Arabic/Indian Numeral System

- Works very well for arithmetic!
  1. $1 + 1 =?$
  2. $3 + 1 =?$
  3. $15 + 5 =?$
  4. $5 - 1 =?$
  5. $5 \times 4 =?$

Maryville

Fundamental Operations of Arithmetic

- Fundamental operations: $+$, $-$, $\times$, $\div$
- Alternate notations for multiplication: 3×5, $3 \cdot 5$, $3(5)$, $3 * 5$
- Alternate notations for division: $4 \div 2$, $\frac{4}{2}$, $2\overline{)4}$, $4/2$

Maryville

Order of Operations and Reduction

- Convention PEMDAS - Parenthesis, Exponent, Multiply, Divide, Add, Subtract
- Multiplication and Division are the same operation, so is Add and Subtract

$$P \quad E \quad \begin{matrix} M & A \\ D & S \end{matrix}$$

Ties are broken left to right

- Example: $3^2 + 4 \times 2 - 16 \div (2 + 2)$

Maryville

Scientific Notation

- Writing very large or very small numbers is very error prone.
- We usually only really care about the first few values (more on this later).
- Base 10 gives us a way to do this!
- Large numbers have 0's at the right hand side. This is effectively multiplying by 10. So we can use exponents:

$$1,200,000 = 1.2 \times 10^6$$

- Small numbers of 0's between the decimal point and nonzero digits. This is effectively dividing by 10:

$$0.0000012 = 1.2 \times 10^{-6}$$

Maryville
